

The Easy Fill, Easy Clean, Hassle-Free, bead transfer system.

Congratulations

on buying a Funnelweb compatible bean bag.

You have not only purchased a premium quality designer lounge product, but have potentially saved yourself much heartache in its filling, maintenance and use.

The Funnelweb™ system is designed by Ambient Lounge™ so that you don't 'spill the beans' when filling, cleaning, topping up and storing your beanbag.

Now all you have to do is relax!

What is the Funnelweb System?

The Funnelweb™ is a two-part system that includes both the funnel gusset located under your bean bag's main zip and an attachable external bag. This bag is designed for easy transfer and/or storage of beans, and used for filling, storing, washing or emptying your bean bag. It's a hassle free process, transforming a potentially difficult & messy task to a simple one-person operation.

This external Funnelweb™ bag attaches to Funnelweb™ compatible bean bags via a secure zip and funnel system that decants beans or filling between the two bags by simply tipping and sealing.

It's easy to use and takes just seconds to master.

Please follow our visual instructions on the following pages...

Filling and Emptying your Bean Bag - Step By Step Guide

1

Begin with a Funnelweb™ external bag filled with enough polystyrene beads to fill your bean bag cover comfortably.

2

Unzip the safety locking Zip on your bean bag cover, pulling out the gusset system from inside the bean bag. Unzip the top zip of the gusset and fold to expose the second thicker Black zip underneath.

Unzip this external Funnleweb™ zip top closure to expose the black zip under the fold.

3

Attach the zip head from the external bag to the bottom zip from the beanbag internal Funnel and zip until fully closed.

4

By simply tipping the beanbag or external Funnelweb™, you can now decant beans between bags without spillage.

5

Fill the bean bag to your own personal comfort levels. You can test by sitting on your bean bag without removing funnelweb. Once satisfied, remove the funnelweb by zipping carefully and shaking so no beans are near the mouth opening.

6

Zip closure on both internal and external Funnelweb.
